Profile

Shopify Developer and front-end engineer with 5+ years building ecommerce storefronts, custom Liquid themes, and automation workflows. Sole developer across a multi-brand DTC portfolio, responsible for everything from theme architecture to CI/CD pipelines. Experienced with Shopify Admin GraphQL API, Storefront API, Webhooks, and the Shopify AI Toolkit (Dev MCP). Comfortable onboarding developers, training non-technical teammates, and delivering independently in remote, fast-moving environments.

Technical Skills

HTML / CSS / SCSS	Liquid / OS 2.0	JavaScript (ES6+)	Tailwind CSS
Shopify GraphQL API	Storefront API / Webhooks	Git / GitHub / CI-CD	Node.js
Shopify AI Toolkit (MCP)	Metafields / Metaobjects	Performance / Core Web Vitals	Python / Django

Professional Experience

Curv Group (Statik · KeySmart · Floatie Kings)

Buenos Aires, Argentina (remote)

Shopify Developer / Web Developer

September 2023 – present

- Sole developer across six live Shopify storefronts for a multi-brand DTC portfolio — led the full Statik.com 3.0 redesign, delivering a complete PDP overhaul and a reusable component system now used as the campaign foundation across all brands.
- Built internal tooling using the Shopify Admin GraphQL API: a product data export feeding B2B content workflows and a store health dashboard flagging inventory and bundle status issues; used the Shopify AI Toolkit (Dev MCP) to write and validate queries against live schemas.
- Owned Git/CI-CD pipelines across a multi-developer environment — managed branch strategy, freelancer theme merges, and production deployments, maintaining stability throughout.
- Onboarded three freelancers onto the codebase and trained a content manager to work independently with custom Sections, reducing development bottlenecks for routine updates.
